BROUWER kesmac

PERFECT CHOICE IN THE HARDEST CONDITIONS OR FOR GENTLE HANDLING OF TENDER TURF

The Brouwer 2200 Harvester on a John Deere 5065E with direct manual hydraulic controls is a reliable workhorse that consistently cuts the highest quality turf. The rigid outer frame surrounds a rugged floating cutting head that has easy pitch and roller adjustments, with hydraulic depth control for reliable sod thickness in all ground conditions. The low front pivot point and heavy pressure on the front roller makes sure that the head follows every contour, while the pivot bearing ensures rapid action back and forth to provide an even cut, even through curves.

- Main beam forward design for better weight distribution
- Independently mounted Curved or Cross Conveyor
- No waste: cuts close to pipes, fences and ditches
- Easy entry with rear piling door for quick service
- Conveyor mat is gentle on turf and long on durability
- Canopy with flashing signal and halogen work lights
- Weights can be added to adapt to various conditions

OPTIONAL:

- 4 Wheel Drive
- Brush attachment
- Piling wall extensions
- Fold down pallet carrier
- Selection of starter trays
- Hydraulic Variable Speed Roll Up
- Secondary standing platform – Slabs
- Auto-steer with fine micro adjustment
- Adjustable piling wall for smaller pallets
- Slabbing attachment; independent hydraulic curved conveyor with rollers/brushes, scrapers, and dirt deflector
- Fold down pallet carrier
- 10 in. Ground Roller
- Mechanical Counter
- Coulter side blades
- Water cooler
